Company :	Myntra
Company Name :	Myntra Jabong Pvt. Ltd.
Nature Of Business :	E- commerce
Designation :	Data Analyst
Tentative Job Location :	Bangalore, Mumbai, Gurgaon including Fulfilment centres and regional hubs in these locations
	Data analysts are a part of Business Insights, category planning, customer experience, revenue operations, marketing and supply chain teams focused on specific functions or initiatives. They work closely with various business functions to enable data driven problem solving and decision making.
	In a large ecommerce company such as Myntra where direct interaction with customers and associates is limited, data is often the only source of truth and therefore plays a key role in performance measurement and decision making. Data analysts work on three broad types of problems to enable this -
Description :	Descriptive - problems involving performance measurement, setting up meaningful metrics, granularity, visualisation and benchmarking for various business functions Investigative - design of experiments, determining success of experiments or initiatives; hypothesis testing, deep dive analysis around specific events or observable trend changes Predictive or Prescriptive - deeper level of problem solving using statistical, machine learning or operations research techniques to generate estimates, forecasts or recommendations for better planning or goal achievement within business functions
	Data analysts should have a flair for structured problem solving and are typically skilled on SQL, Python, R and other applications that handle big data. They should also possess good applied knowledge of commonly used statistical concepts, machine learning and operations research techniques.
